

Mockup for Zachary Portfolio

Prepared for 02 Mockup Ex Cr | September 11, 2026

Designer and client: Zachary Langborgh (personal educational project)

Project purpose: Present my cybersecurity education, developing technical skills, work experience, and leadership to potential employers and academic contacts.

Existing website: <https://zachlangborgh-png.github.io/zachary-portfolio/>

Scope: A maximum of five primary pages: Home, Resume, Portfolio, Newsletter, and Contact. This proposal expands the existing Home and Resume structure. It includes one shared stylesheet, responsive layouts, and one server-side contact form. Additional pages or features require a revised plan and client approval.

Visual direction: Keep the existing navy masthead, light-blue navigation, white content area, teal accents, and Arial type. The following diagrams use mock content and image placeholders, not finished page content.

Three similar sites and what I like

Adham Dannaway - favorite

<https://www.adhamdannaway.com/>

I like the clear horizontal navigation, prominent introduction image, and separation between the introduction and project examples. I can use that organization while keeping my own colors and content.

Brittany Chiang

<https://brittanychiang.com/>

I like having About, Experience, Projects, and a full resume link easy to find. That organization gives me a useful model for connecting my background to examples of my work.

Matt Farley

<https://mattfarley.ca/>

I like the clear introduction, separate skill categories, and Recent Work section. Those sections give visitors a quick way to understand someone's abilities and see examples.

Favorite sample: homepage capture

Adham Dannaway | Reference for navigation, introduction, and project organization

Source: <https://www.adhamdannaway.com/>

Homepage viewport screenshot captured September 11, 2026.

Design ideas for my site: Keep the page links together across the top, make my identity clear in the header, and separate introductory content from work examples. My mockup uses a simpler text-and-portrait layout and the colors already on my portfolio.

This screenshot is a design reference. The proposed pages use my own content and authorized images.

Home page layout

index.html | Introduction, goals, technical interests, and experience

Layout: Introductory text uses about two-thirds of the content width, with a portrait on the right. Later sections span the page or share two columns. On phones, text appears before the portrait and all columns stack.

Resume page layout

resume.html | Education, skills, work, leadership, and certification

Layout: A narrow skills column sits beside the main resume content. The optional preview thumbnail links to a readable resume document. Text remains selectable and readable; mobile order is heading, skills, then experience.

Portfolio page layout

portfolio.html | Proposed examples of coursework and developing skills

Layout: Two project columns on desktop, one on phones. Screenshots sit above their captions. Add only work I have actually completed; these labels reserve space for future selections and do not claim completed security projects.

Newsletter page layout

newsletter.html | Learning updates, reflections, and project progress

Layout: A main article column and narrower updates column. The featured image appears before the article. On phones, the article comes first and the updates follow. This is a website newsletter page, with no email subscription system in scope.

Contact page layout

contact.html | Proposed server-side contact form

Home

Resume

Portfolio

Newsletter

Contact

Contact heading | [Short invitation to get in touch]

Name * | [Text field]

Email * | [Email field]

Message * | [Multiline text field]

[Send Message button]

[Contact icon
image placeholder]

[Email link]

[Response information]

* Required fields

Footer: contact links | Return to Top | Copyright

Layout: Form on the left and contact information on the right; stack on phones. Each field has a visible label. Plan space for validation errors and a success message. Before launch, connect and test a server-side handler supported by the chosen hosting arrangement.

Delivery deadlines and sign-off

Proposed project milestones | Blank approval lines are intentional

Client: Zachary Langborgh. These are proposed planning dates, not a record of completed work or additional instructor deadlines. The existing Home and Resume will be reviewed and refined during these phases.

Target date	Deliverable / approval checkpoint	Client sign-off
Oct 16, 2026	Finish and approve this design mockup.	Initials: _____ Date: _____
Oct 18, 2026	Submit mockup PDF before 11:55 p.m.	Initials: _____ Date: _____
Oct 23, 2026	Finalize shared CSS, masthead, navigation, and footer.	Initials: _____ Date: _____
Oct 25, 2026	Complete Home layout, portrait placement, and content.	Initials: _____ Date: _____
Oct 30, 2026	Complete Resume page and resume document link.	Initials: _____ Date: _____
Nov 6, 2026	Complete Portfolio page and selected work examples.	Initials: _____ Date: _____
Nov 13, 2026	Complete Newsletter page and learning update.	Initials: _____ Date: _____
Nov 20, 2026	Complete Contact page and server-side form testing.	Initials: _____ Date: _____
Nov 27, 2026	Check phone layouts, keyboard use, images, and links.	Initials: _____ Date: _____
Dec 1, 2026	Make final modifications and obtain final sign-off.	Initials: _____ Date: _____

Scope approval: Maximum five primary pages and the features described in this proposal.

Client signature: _____ **Date:** _____

Web design guidelines

Ten guidelines I will follow while developing my portfolio

- 1. Consistent navigation.** Use the same page names, order, and navigation position on all five pages. [1]
- 2. Clear structure.** Use one main page heading and descriptive section headings in a logical order. [2]
- 3. Readable contrast.** Use text and background colors with sufficient contrast; check the final combinations before publishing. [1]
- 4. More than color.** Identify links and errors with text or another visible cue, not color alone. [1]
- 5. Keyboard access.** Make every link and form control usable from the keyboard and keep the focused item visible. [1, 2]
- 6. Flexible layouts.** Let columns stack on small screens and check that content remains usable when text is enlarged. [1]
- 7. Helpful image alternatives.** Write useful alt text for meaningful images and empty alt text for purely decorative images. [2]
- 8. Descriptive links.** Use labels such as View Resume or View Python Project so the destination is understandable. [2]
- 9. Accessible forms.** Give each contact field a visible associated label, explain required fields, and provide clear error and success feedback. [1, 2]
- 10. Comfortable reading.** Group related content, leave space between sections, and avoid crowded paragraphs or decorative clutter. [1]
